<b>S.1.</b>	<b>More Joins (01-12-22)</b>	<b>2</b>
<b>S.2.</b>	<b>PRACTICAL: further joins (01-12-22)</b>	<b>3</b>

## S.1. MORE JOINS

📅 01-12-22

🕒 13:00

🎓 Mark

📍 RB LT1

The joins we have looked at so far are **inner** joins. This displays the data where the tables overlap. For example

```
LANGUAGE: SQL
1 SELECT CUSTOMER.CUST_ID, CUST_ORDER.CUST_ORD_ID FROM CUSTOMER
2 JOIN CUST_ORDER ON CUSTOMER.CUST_ID=CUST_ORDER.CUST_ID;
```

Will probably use this the most.

### Left Join

This will produce everything from the left table (**customer**) and the overlapping data from the right hand table (**cust\_order**) where there is a match on the common attribute to both (**cust\_id**)

```
LANGUAGE: SQL
1 SELECT CUSTOMER.CUST_ID, CUST_ORDER.CUST_ORD_ID FROM CUSTOMER
2 LEFT JOIN CUST_ORDER ON CUSTOMER.CUST_ID= CUST_ORDER.CUST_ID;
```

### Right Join

This will return everything from the right table (**cust\_order**) and common data where it is there.

```
LANGUAGE: SQL
1 SELECT CUSTOMER.CUST_ID, CUST_ORDER.CUST_ORD_ID FROM CUSTOMER
2 RIGHT JOIN CUST_ORDER ON CUSTOMER.CUST_ID= CUST_ORDER.CUST_ID;
```

It is important to use the correct join for the situation as when used incorrectly as you won't get the data returned which you are expecting.

### Outer Joins

This gives everything from all the tables mentioned in the query.

```
LANGUAGE: SQL
1 SELECT role_name, staff_lname, staff_fname FROM staff FULL OUTER JOIN
2 ROLE ON ROLE=role_id;
```

Will probably use this the least.

### Things To Remember

- Use the correct type of join for the job
- Match like for like

## S.2. PRACTICAL: FURTHER JOINS

📅 01-12-22

🕒 14:00

🎓 Mark etc

📍 FTC 3

### Tutor Led

We need to insert two more roles into the `Role` table.

LANGUAGE: SQL

```
1 INSERT INTO ROLE (role_name)
2 VALUES ('Cleaner');
3
4 INSERT INTO ROLE (role_name)
5 VALUES ('Pre Sales');
```

Then run the following.

LANGUAGE: SQL

```
1 SELECT count(*)
2 FROM ROLE;
```

This generates the following output

LANGUAGE: Unknown

```
1 count
2 -----
3      7
4 (1 row)
```

### Student Tasks

1. Write a query that correctly displays the staff members first and last names, their email addresses and their roles. Use the method that uses the `JOIN` keyword. Copy the code and answer below.

LANGUAGE: SQL

```
1 SELECT staff.staff_fname, staff.staff_lname, staff.home_email, role.role_name FROM staff
2 JOIN role on staff.role = role.role_id;
```

LANGUAGE: Unknown

```
1 staff_fname | staff_lname | home_email | role_name
2 -----+-----+-----+-----
3 Montgomery | Housegoe   | mhousegoe2@ucoz.ru | Order Picker
4 Niel       | Welsby     | nwelsby0@rambler.ru | Final Packer
5 Jillene    | Revitt     | jrevitt8@cornell.edu | Post Sales
6 Harriette  | Fewster    | hfewster7@independent.co.uk | Post Sales
7 Aura       | Clewlowe   | aclewlowe5@google.com.au | Post Sales
8 Hanan      | Gloster    | hgloster3@blogger.com | Customer Retain
9 Nikoletta  | Shrimpton  | nshrimpton1@unblog.fr | Customer Retain
10 Tim       | Illem      | tillem9@dedecms.com | Misc
11 Nell      | Olsson     | nolsson6@jiathis.com | Misc
12 Janeva    | Gillicuddy | jgillicuddy4@altervista.org | Misc
13 (10 rows)
```

2. Rewrite the query created in 1 but this time use the `WHERE` keyword. Copy the code and answer below.

LANGUAGE: SQL

```
1 SELECT staff.staff_fname, staff.staff_lname, staff.home_email, role.role_name FROM staff, role
2 WHERE staff.role = role.role_id;
```

LANGUAGE: Unknown

staff_fname	staff_lname	home_email	role_name

(10 rows)

3. List the customer first and last names with their email addresses and the product names of the products they have ordered. But only for the customers who live in Waekolong. Copy the code and the answer below.

LANGUAGE: SQL

```
1 SELECT customer.cust_fname, customer.cust_lname, customer.email, product.prod_name FROM
   ↳ customer
2 JOIN cust_order ON customer.cust_id=cust_order.cust_id
3 JOIN manifest ON cust_order.cust_ord_id=manifest.cust_ord_id
4 JOIN product on manifest.prod_id=product.prod_id
5 WHERE customer.town='Waekolong';
```

LANGUAGE: Unknown

cust_fname	cust_lname	email	prod_name

103	(100 rows)		

7. Write a query that will list all staff members first and last names along with their email addresses that are cleaners. Copy the code and the answer below.

LANGUAGE: SQL

```
1 SELECT staff.staff_fname, staff.staff_lname, staff.work_email FROM staff
2 JOIN role ON staff.role=role.role_id
3 WHERE role.role_name='Cleaner';
```

LANGUAGE: Unknown

```
1 staff_fname | staff_lname | work_email
2 -----+-----+-----
3 (0 rows)
```

8. How many staff are there who have the role Misc? Copy the code and the answer below.

LANGUAGE: SQL

```
1 SELECT count(*) FROM staff
2 JOIN role ON staff.role = role.role_id
3 WHERE role.role_name='Misc';
```

LANGUAGE: Unknown

```

1 count
2 -----
3      3
4 (1 row)

```

9. What are the addresses of the staff that are returned by the query for Q8? You should output their first and last names too. Copy the code and the answer below.

LANGUAGE: SQL

```

1 SELECT staff.staff_fname, staff.staff_lname, concat_ws(' ', addr1, addr2, town, postcode) AS "
   ↪ address"
2 FROM staff
3 JOIN role ON role.role_id = staff.role
4 WHERE role.role_name='Misc';

```

LANGUAGE: Unknown

```

1 staff_fname | staff_lname | address
2 -----+-----+-----
3 Janeva      | Gillicuddy  | 6999 Kings Park Sachtjen Portsmouth P005 5SF
4 Nell        | Olsson      | 18424 Kenwood Court Farmco Havant P022 6DL
5 Tim         | Illem       | 85 Lillian Way Farragut Southsea P093 0CN
6 (3 rows)

```

10. List the product id numbers with their names that start with the letters Re . Copy the code and the answer below.

LANGUAGE: SQL

```

1 SELECT prod_id, prod_name FROM product
2 WHERE prod_name LIKE 'Re%';

```

LANGUAGE: Unknown

```

1 prod_id | prod_name
2 -----+-----
3      7 | Re-engineered cohesive methodology
4     11 | Re-engineered explicit software
5     18 | Re-engineered actuating capability
6     26 | Realigned 5th generation artificial intelligence
7     39 | Realigned homogeneous hub
8     56 | Reduced fresh-thinking process improvement
9     59 | Realigned client-driven database
10     76 | Re-engineered 24/7 knowledge base
11 (8 rows)

```

11. List the product id numbers with their names that have the word **value** in the name somewhere. Copy the code and the answer below.

LANGUAGE: SQL

```

1 SELECT prod_id, prod_name FROM product
2 WHERE prod_name LIKE '%value%';

```

LANGUAGE: Unknown

```

1 prod_id | prod_name
2 -----+-----
3      80 | Profound value-added intranet

```

```
4 (1 row)
```

12. List the product names along with their id numbers that have **Value** somewhere in their name. Copy the code and the answer below

```
LANGUAGE: SQL
```

```
1 SELECT prod_id, prod_name FROM product
2 WHERE prod_name LIKE '%Value%';
```

```
LANGUAGE: Unknown
```

```

```

13. List the customer first and last names along with their email addresses, the customer order id, the category names and the product names for orders that have been placed for all products that have the word **able** in the name. (The case matters). Order by the category and the product name. The output should have the category names in alphabetical order then within each category the products should be ordered in alphabetical order. Copy the code and the answer below.

```
LANGUAGE: SQL
```

```
1 SELECT customer.cust_fname, customer.cust_lname, customer.email, cust_order.cust_ord_id,
   ↪ category.cat_name, product.prod_name from customer
2 JOIN cust_order ON customer.cust_id=cust_order.cust_id
3 JOIN manifest ON cust_order.cust_ord_id=manifest.cust_ord_id
4 JOIN product on manifest.prod_id=product.prod_id
5 JOIN category on category.cat_id=product.prod_cat
6 WHERE product.prod_name LIKE '%able%'
7 ORDER BY category.cat_name, product.prod_name;
```

```
